

AIRPORT INDEX

It is a great pleasure for me to present you the comprehensive study drafted by Mr. Josep Maria Serra since this study, the first of its kind, perfectly illustrates the real dimension of airport activities in cities and regions throughout Europe.

It is quite impressive to see the high number of municipalities and territories linked with airports, a relation which explains the social and political need for an organisation such as Airport Regions Council. Also, it is of the utmost importance to include the voice of territories in all the aspects of airport and aviation policies, in order to develop airport and aviation sectors so as to increase the quality of life of citizens, mainly by connecting people and goods, while aiming at reaching a minimum negative environmental impact and a maximum of positive social aspects.

Erich Valentin

ARC President,
Member of the Vienna City Council and the State Parliament,
chairman of the Committee for Innovation,
Urban planning and Mobility

AIRPORT INDEX

This document serves as an index to find airports and obtain relevant information about them. The index contains all airports from current European Union member states that exceeded 1 million passengers in 2019. Airports in overseas territories are not included (only affects airports in the French islands of Martinique, Guadeloupe, and Reunion). Airports that have ceased operating, at the time of writing this document, are also excluded (only affects Berlin-Tegel). Airports are sorted alphabetically.

Airport names and number of passengers are extracted from Eurostat. Specifically, the total number of passengers carried during the year 2019, in each major airport of each EU country.

For each airport, the following information is provided: country, number of passengers in the year 2019 (approximated to two significant digits), affected regions (if available), affected municipalities, airport operator, Shareholders, and distribution of the airport operator's board of directors, with regional participation identified by bolded text.

Countries are expressed in English (i.e., Spain, not España). Region and city names are expressed in English (when it exists) and in the country's official language (i.e., Lower Saxony / Niedersachsen; The Hague / Den Haag). For countries with a non-Latin alphabet, such as Greece, the romanised version of the name is used (i.e. Athens / Athína).

Affected cities are selected by checking population centres inside a rectangle extending 5km from the ends of the runway of the airport, and 2km to the sides. For airports with multiple runways, all of them are checked individually for potentially affected population centres. The nearest large city (usually the regional capital) is also included, even if it falls outside the affected rectangle, and marked in bold. Affected regions are selected according to the affected municipalities.

Contact information about the municipalities and regions can be found in the "List of affected regions and municipalities".

This document was started in March 2022 and was finished in June 2022. Information may have changed since then.
